Important Safety Information for Lyza[®] (Norethindrone Tablets, USP 0.35 mg)

Indications: Progestin-only oral contraceptives are indicated for the prevention of pregnancy.

Contraindications include known or suspected pregnancy, known or suspected carcinoma of the breast, undiagnosed abnormal genital bleeding, benign or malignant liver tumors or active liver disease, and hypersensitivity to any components of the pills.

WARNINGS include ectopic pregnancy considerations, delayed follicular atresia/ovarian cysts, irregular genital bleeding, carcinoma of the breast and reproductive organs, and hepatic neoplasias.

PRECAUTIONS include carbohydrate and lipid metabolism, drug interactions, interactions with laboratory tests, pregnancy, nursing mothers, pediatric use, fertility following discontinuation, and headache.

ADVERSE REACTIONS reported with progestin-only pills include menstrual irregularities, headache, breast tenderness, nausea, and dizziness. Androgenic side effects such as acne, hirsutism, and weight gain occur rarely.

Patients should be counseled that this product does not protect against HIV infection (AIDS) and other sexually transmitted diseases.
